Entrepreneurship and Enterprise Hub

MODULE HANDBOOK

ENT207TC
Digital Startup Lab

Module Leaders:
Dr. Bogdan Marculescu and Dr. Stefan Seedorf

Semester 1 | Academic Year 2026-2027

SECTION A: BASIC INFORMATION

1. Welcome to the Digital Startup Lab

Welcome to ENT207TC Digital Startup Lab! This module is a hands-on, challenge-based journey where you and your team will learn how to take an idea from concept to a working digital product, just like a real-world startup team.

The Digital Startup Lab is intentionally designed as a co-learning environment. While the module leaders will provide structure, guidance, and feedback, we will also explore new tools, technologies, and startup challenges together. In fast-moving fields like digital entrepreneurship, knowing how to learn, adapt, and experiment matters more than having all the answers.

One of your key resources is your EEH Mentor, a high-quality mentor here to help you think deeper, connect to relevant expertise, and navigate the challenges of building a real product. Administrative coordination and progress tracking is handled by Teaching Assistants (TAs), who will help ensure your team stays on track week by week.

2. Key Module Information

Module Title	Digital Startup Lab
Module Code	ENT207TC
Originating Department	Entrepreneurship and Enterprise Hub
Module Level	2 (FHEQ level 5)
Module Credits	5
Pre-requisites	N/A
Shared Programs	BA Arts, Technology and Entertainment; BEng Data Science and Big Data Technology; BEng Intelligent Manufacturing Engineering; BEng Internet of Things Engineering; BEng Intelligent Robotics Engineering; BSc Intelligent Supply Chain; BEng Microelectronic Science and Engineering with Contemporary Entrepreneurialism

3. Mode of Delivery and Hours

	Lectures	Lab / Practicals	Private Study	TOTAL
Hours / Semester	0	40	60	100
Delivery Pattern		4 x 10 (4 hrs/week x 10 weeks)	Self-directed	

4. Module Description

Aims and Fit of the Module
This module is designed to give students a comprehensive foundation in the modern startup ecosystem. It aims to: • Provide an in-depth understanding of technological advancements relevant to digital startups, including artificial intelligence, AI agents, no-code and low-code platforms, and emerging technologies. • Equip students with essential skills to navigate the landscape of digital startups, integrating technology-driven solutions while understanding ecosystem components, resources, and support networks. • Cultivate emotional intelligence and resilience crucial for entrepreneurs, enabling students to manage the complex challenges inherent in digital entrepreneurship. • Introduce students to structured product development through milestone-based learning, Kanban-style workflow management, and iterative prototyping. • Develop the ability to use AI agents as intelligent tools to augment startup workflows and product features.

5. Learning Outcomes

Code	Learning Outcome
A	Develop a comprehensive understanding of cutting-edge technologies pivotal in digital startup ecosystems, discerning their application and significance within entrepreneurial ventures.
B	Identify and analyze technological integration within startups, employing diverse methodologies and tools that optimize technological resources.
C	Cultivate emotional intelligence and resilience, fostering the ability to navigate the emotional highs and lows inherent in digital entrepreneurship.
D	Conceptualize and implement innovative solutions by integrating technologies including AI agents and intelligent automation.
E	Attain proficiency in interactive simulations and digital tools, applying technological insights to entrepreneurial challenges through real-world practice.

6. Assessment Overview

Seq.	Type	Method	LOs Assessed	Duration	% of Mark
001	CW	Group Project	A, B, C, D, E	N/A	100

The group project grade is composed of four components:

Component	Weight	Type	Notes
Weekly Process	40%	Group	Weekly deliverables and documented progress
Final Deliverables	30%	Group	Drafts + Checkpoints + Digital Prototype Report + Promotion Report + User Testing Report
Demo Day	20%	Group	Live Demo Day performance + professional video submission
Journey Reflection	10%	Group	End-of-semester reflective report on learning and process
TOTAL	**100%**		

Individual marks may differ from the group mark by up to 10 percentage points in exceptional cases; see Section 14 (Final Review)

7. Semester Structure and Phases

Phase	Weeks	Focus
Decision & Digital Prototype	1 – 3	Team formation, problem framing, Kanban boards, UX design, wireframes, digital prototypes. **Checkpoint 1 at end of Week 3.**
Building	4 – 7	App development, feature integration, AI agents. **Checkpoint 2 at end of Week 7.**
Promoting & Testing	8 – 9	Promotion campaign, user testing, iteration. **Checkpoint 3 at end of Week 9.**
Demo Day	10	Final presentation, live demo
Final submission	11	Final submission

Three formal checkpoints serve as structured progress milestones and contribute to the Final Deliverables component:

- Checkpoint 1 — End of Week 3: Decision gate. Teams present their validated problem to their Mentor, their solution concept, and the digital prototype.
- Checkpoint 2 — End of Week 7: Building review: Teams demonstrate to their Mentor their working app with at least three features.
- Checkpoint 3 — End of Week 9: Demo readiness. Teams present to their Mentor their promotion results, user testing data, and iterative fixes.

Students who repeatedly fail to participate in scheduled project activities, checkpoints or Demo Day may not be able to demonstrate achievement of the intended learning outcomes and may therefore receive reduced marks based on academic judgement.

8. Weekly Schedule

Week	Focus / Theme	LOs	Tools	Delivery	Hours	Deliverables
PHASE 1: DECISION & DIGITAL PROTOTYPE (Weeks 1–3)						
1	**Kickoff & Team Formation** Team formation, Spaghetti Challenge, Vibe Coding 101, AI Challenge.	A B C	AI tools, Kanban	Bogdan Marculescu, Stefan Seedorf, Mentors, Group formation	4 hr	Group composition and problem ideas submitted via weekly milestone form
2	UX Design & Wireframes	A B C D	Visily, Figma, Pixso, Kanban	Bogdan Marculescu, Stefan Seedorf,	4 hr	Wireframes + concept pitch

			board tool	Mentors, Group work		
3	Figma MVP Build CHECKPOINT 1	A B C D	Visily Figma, Pixso, Kanban	Bogdan Marculescu, Stefan Seedorf, Mentors, Group work	4 hr	MVP v0.1 clickable prototype | **Checkpoint 1** (problem, concept, digital prototype)
PHASE 2: BUILDING (Weeks 4–7)						
4	**AI Agents Workshop** Introduction to AI agents. Integration strategy for startup projects. Tech stack decision	A B D	AI Agents platform	Stefan Seedorf, Bogdan Marculescu, Mentors, Group work	4 hr	Agent integration plan Tech stack decision Start building **Draft 1 (digital prototype report)**
5	Authentication & First Feature	A B D	Platform of choice (Softr, Lovable, Base44, or other)	Bogdan Marculescu, Stefan Seedorf, Mentors, Group work	4 hr	Working login + Feature 1
6	Integration & Second Feature	A B C D E	Platform of choice, AI tools	Bogdan Marculescu, Stefan Seedorf, Mentors, Group work	4 hr	Working app with 2 features
7	Advanced Features CHECKPOINT 2	A B C D	Platform of choice, AI, Kanban	Bogdan Marculescu, Stefan Seedorf, Mentors, Group work	4 hr	Working app with 3 features **Checkpoint 2** (app, Kanban evidence, tech stack choice, reflection)
PHASE 3: PROMOTING & TESTING (Weeks 8–9)						
8	Hackathon — Promo Pack	C D	Canva, Visily, platform	Bogdan Marculescu, Stefan Seedorf,	4 hr	Promo pack: 1-min video + visuals + social media post +

			of choice	Mentors, Group work		landing page. Promotion starts.
9	**Testing, Quality & Promotion** CHECKPOINT 3	C D	Testing tools, analytics	Bogdan Marculescu, Stefan Seedorf, Mentors, Group work	4 hr	Usability testing report (10+ testers) + fixes + promotion evidence | Checkpoint 3 submission Mentor review. **Draft 2 (Promotion report, User testing report)**
PHASE 4: DEMO DAY (Week 10)						
10	DEMO DAY	A B C D E	All	Bogdan Marculescu, Stefan Seedorf, Mentors, School support/judges	4 hr	Live demo + pitch deck + professional video (with subtitles) + live recording. Overall reflection.
End of Week 11	Submission deadline for all documentation					

Note: Week 4 may be a university break depending on the academic calendar. The schedule above assumes continuous delivery; the module leader will confirm exact week numbering at the start of semester.

9. Recommended Tools

Students are free to choose the digital tools that best serve their project. The following are recommended and supported by the module:

Category	Tools
UX / Wireframing	Visily, Figma, Pixso
No-code / Low-code App Development	Softr, and any other platform of your choice (e.g., Lovable, Base44, custom coding, or emerging tools). As long as they can complete all the requirements, the teams are free to choose their tech stack.
Design & Visuals	Canva or any design tool of preference
AI & Smart Features	DeepSeek or any AI; local API for AI Agents (to be confirmed)

Project Management	Every student is strongly advised to fulfill the tracking requirements by maintaining logs and proof.

10. Progress Logging

Each week, to optimize workflow efficiency, students are strongly encouraged to log their progress consistently, every week.

11. Contact Details

Module Leaders

Name	Email	Office / Hours
Dr. Bogdan Marculescu	Bogdan.Marculescu@xjtlu.edu.cn	E-5070; by appointment (schedule via email)
Dr. Stefan Seedorf	Stefan.Seedorf@xjtlu.edu.cn	E-5020; by appointment (schedule via email)

EEH Mentors

Mentors are experienced faculty responsible for guiding your team's thinking, connecting you to specialists and resources, and challenging you to reach higher standards. Mentor assignments and contact details will be communicated at the beginning of the semester.

Note: Mentor slots may change each semester. Updated contact information will be provided via the Learning Mall Online.

Each Mentor is assigned to a specific number of groups and is responsible for delivering high-quality mentoring, facilitating deep thinking, connecting teams to relevant expertise, and pushing teams beyond surface-level solutions. Please note, administrative tasks are handled by TAs and not the Mentors. Your conversation with the Mentors should be exclusively about your project work and direction, and they will provide guidance related to your projects (do not ask them where to submit or any such basic questions).

Teaching Assistants (TAs)

TAs play a key coordination and accountability role in ENT207TC. Each TA is assigned to a number of groups and is responsible for all the box ticking administrative tasks:

- Monitoring their assigned student groups.
- Reviewing weekly automated progress indicators to immediately flag operational delays or unequal workload balances.
- Conducting regular check-ins with assigned groups.
- Verifying the authenticity and completion of milestone deliverables and active workflow histories uploaded.
- Supporting the administration of checkpoints.
- Escalating concerns to mentors and module leaders promptly.

TA assignments and contact details will be shared at the start of the semester via Learning Mall Online.

SECTION B: WHAT YOU CAN EXPECT FROM THE MODULE

12. Educational Philosophy

Think of this lab not as a classroom, but as a startup studio. You are not just students, you are designers, founders, analysts, and creators. Let's build things that matter, and learn what we do not know yet, together.

Over the semester, you will experience the full digital startup cycle: from identifying a meaningful problem, brainstorming creative solutions, building prototypes, promoting your app, gathering user feedback, and pitching your product at Demo Day.

We use three interconnected learning philosophies:

- Constructionist learning: by building real prototypes, you learn by doing.
- Facilitative teaching: we act as mentors, sounding boards, and co-explorers more than traditional lecturers.
- Heutagogy (self-directed learning): you take ownership of your learning path, choosing technologies and directions that suit your interests and goals.

13. What Will You Do?

1. From idea to solution: you will identify problems worth solving, explore the problem-solution space, and frame issues that inspire innovation.
2. Sketch the solution: you will brainstorm multiple approaches and sketch low-fidelity wireframes showing your core features.
3. Building a digital version: you will transform sketches into interactive digital prototypes using design thinking and UX principles.
4. Create an app: you will use platforms and code of your choice to build a minimum viable product (MVP) app.
5. Work with AI agents: you will explore how intelligent agents can augment your startup product and automate specific workflows.
6. Promo & launch campaign: you will create a promotional package including a 1-minute video, landing page, and visuals, and you will use them to find real users to test your app.
7. User testing and feedback: you will test with real users, collect structured feedback, and iterate.
8. Demo Day: you will showcase your product in a public pitch event and submit a professional-quality video.

14. Assessment Components — Details

The Weekly Process component evaluates how the team worked throughout the semester, while the Final Deliverables evaluates the quality and completeness of the final project outputs and supporting evidence. Think of the Process component as assessing *how* your team built the project, and the Final Deliverables as assessing *what* your team ultimately produced. The Demo Day will be the demonstration of your work.

Weekly Process (40%)

Team progress is evaluated through weekly milestone deliverables and consistent workflow tracking.

To establish a transparent individual contribution trail, students are highly encouraged to carefully document their weekly individual contributions.

Each group should submit 2 Drafts: Draft 1 (Week 4) and Draft 2 (Week 9).

Draft 1 is submitted in Week 4 and covers the digital prototype report, documenting the problem, solution concept, chosen features.

Draft 2 is submitted in Week 9 and covers tech stack choice, the promotion report and user testing report.

Both drafts form part of the Final Deliverables and must be submitted in the LM. Submitting on time matters, these drafts are the evidence trail that supports your final grade. More specific, Draft 1 becomes the basis for your final Digital Prototype Report, and Draft 2 becomes the basis for your final Promotion Report and User Testing Report; you are refining the same documents, not producing new ones.

Each group will maintain a Kanban board throughout the semester. We will verify the board activity. Kanban is not just a tool; it is evidence of how your team organizes and executes work.

Final Deliverables (30%)

The Final Deliverables is a curated record of your team's project journey, submitted at the end of the semester. It must include:

- Checkpoint 1 Report (End of Week 3): problem choice, problem validation, solution concept, digital prototype (the digital prototype and set of chosen features).
- Checkpoint 2 Report (End of Week 7): tech stack rationale, working app with 3 features, Kanban evidence, building reflection.
- Checkpoint 3 Report (End of Week 9): promotion evidence (channels, reach, engagement), user testing data (10+ testers), bug fixes implemented, launch readiness self-assessment.
- Digital Prototype Report (End of Week 10): final product documentation — architecture overview, feature set, tech stack, access instructions for assessors, known limitations.
- Promotion Report (End of Week 10): channels used (with dates), materials deployed (video link, landing page), reach and engagement metrics, testers onboarded, what worked / what did not, timestamped evidence screenshots.
- User Testing Report (End of Week 10): structured report on 10+ real users — testing methodology, key findings, user quotes or data, changes implemented based on feedback.

Demo Day (20%)

Demo Day is the culmination of your startup journey. Each team will:

- Deliver a live demonstration and Q&A in front of peers, mentors, and invited guests.
- Submit the live recording of Demo Day. The team is responsible for recording during Demo Day.
- Submit a professionally edited demo video, created and edited by your team, with subtitles and production quality. This should represent your best pitch to the world.
- Your demonstration of your working digital prototype must satisfy the interactive simulation requirement. As part of the live demonstration, walk through a realistic user scenario simulation within your app — the inputs, the interaction, the resulting output — and explain how that insight would inform a real product, market, or operational decision for your venture.

Journey Reflection (10%)

A group reflection (minimum 900 meaningful words) covering the module's format, support received, tools used, challenges faced, and suggestions for improvement. One upload per group.

Final Review

All members of a group normally receive the same group mark for each component. Where accumulated process evidence such as Kanban history, weekly milestone submissions, drafts, checkpoints, TA check-in notes, and Mentor observations clearly show that a student's contribution was substantially different from their teammates', Module Leaders and EEH Mentors may adjust that student's individual mark relative to the group mark. Any such adjustment is capped at a maximum of 10 percentage points, and is decided by Module Leaders and/or EEH Mentors based on process evidence.

15. External Mentors

Each team is expected to engage with at least one external mentor during the semester. External mentors can be XEC faculty, industry practitioners, alumni, or domain experts who can provide real-world perspective on your project.

The External Mentor Feedback Form (Form 3, Section D) must be completed and submitted by each group to document at least **one** external mentor per semester.

SECTION C: ADDITIONAL INFORMATION

16. Student Feedback

The University is keen to elicit student feedback to make improvements for each module in every session. The preferred approach is through the online Student Module Feedback Questionnaire. Students will be invited to complete this at the end of the semester.

In addition, ENT207TC module leaders will conduct an additional feedback process, and students will be asked to anonymously complete a brief mid-semester and end-of-semester check.

17. Academic Integrity

Offences of plagiarism, cheating, or fabrication can result in attendance at a University-level committee and significant penalties. Please read the Academic Integrity Policy available on e-Bridge in the Assessment and Examination section.

The use of AI tools is permitted and encouraged in this module as part of the authentic learning experience. However, all AI-assisted work must be disclosed, and the intellectual contribution of your team must be evident. Using AI to complete work without understanding or contributing to it is treated as a form of academic dishonesty.

18. Submission Rules and Late Penalties

All submission rules and late submission penalties are governed by the University's Code of Practice for Assessment, available on e-Bridge. Late submissions will incur a 5% deduction per day, up to five days. Submissions beyond five days are not accepted.

19. Mitigating Circumstances

The University can take into account mitigating circumstances such as illness or significant personal events. Students must keep their Academic Advisor or Development Advisor informed. Follow the procedures in the Mitigating Circumstances Policy on e-Bridge.

20. Learning Mall Online

All module resources, submission links, TA contact details, and announcements are available on Learning Mall Online: https://sso.xjtlu.edu.cn/login

SECTION D: FORMS

Form 1 — Weekly Log [one per group, every week]

Each group must maintain this logbook throughout the module. It documents project progress, challenges, support sought, and outcomes. Submitted weekly via the milestone platform.

Team Name: **Session and Group name/table:**	
Members (Names & IDs):	
Week #:	
Kanban board status (attach screenshot):	
Proof uploaded (Y/N):	

1. Summary of Work Completed This Week: (Briefly describe what you worked on, features built, tasks completed, agent integrations explored, etc.)

2. Challenges Encountered: (Technical, communication, or resource blockers.)

3. Help Requested and evidence (Mentor, TA, school specialist, external mentor)

4. Support Outcome (Was your issue solved? What was the response? What alternative did you pursue?)

5. Individual weekly reflection (one short entry per team member) (Briefly describe a challenge, setback, or interpersonal moment this week and how you responded to it.)

Signatures (All Team Members): _____

Form 2 — TA Group Tracker

Used by TAs to track progress and verify evidence across assigned groups. One sheet per TA per session.

TA Name:	
Week # / Session:	

Group Number	Check-in Date	Time Spent (min)	Kanban Checked	Proof Uploaded	Issues / Notes
			Y / N	Y / N	
			Y / N	Y / N	
			Y / N	Y / N	
			Y / N	Y / N	
			Y / N	Y / N	

Weekly Summary: (Bullet points on common blockers, group progress, escalations, and items to raise with module leader.)

Flags: (students absent or not responding or with no activity)

-

-

-

Form 3 — External Mentor Feedback Form [at least one per semester]

Thank you for supporting our students. Your insights help guide their development and contribute to their assessment.

Team / Student Name(s):	
Mentor Name:	
Organization / School:	
Date & Duration:	

1. Why did the team contact you? (Context and problem presented)

2. What specific support or request did they make?

3. What guidance or support did you provide?

4. How did the team respond?
   - They actively engaged and asked follow-up questions
   - They acknowledged and promised to consider the feedback
   - They seemed unsure or resistant
   - No response or unclear follow-up

5. Any additional comments or suggestions?

Thank you for your time and commitment to our students.

SECTION E: ACCEPTABLE FEATURES FOR PROJECTS

21. Feature Guidelines

The list below illustrates types of features that are acceptable and meaningful in ENT207TC. These are here to inspire, not to restrict. What matters is that every feature directly helps solve a real problem for your intended users. You are not building for practice — you are building to make a difference.

Navigation & Access

- Guest access with limited functionality
- Role-based access (admin, user, mentor, etc.)
- Structured user flows with access-specific content

User Interaction Features

- Customizable profile that influences app functionality
- Dynamic task or goal tracker with progress logic
- Smart calendar or reminder tied to user input or behavior
- Gamified progress indicators (badges, levels, streaks)

AI & Smart Features

- Chatbot trained on specific user needs or data
- AI-generated suggestions that adapt over time
- AI agents that perform tasks autonomously within your app
- Input analysis with personalized recommendations
- Auto-generated summaries or reflections from user content

Logic, Data & Feedback Systems

- User-facing database features (filter, sort, search)
- Real-time leaderboard or comparison system
- Analytics dashboard that visualizes trends
- Systems that evolve based on cumulative user activity

Advanced Features

- Integrations that add real functionality (AI, finance, weather, IoT)
- Secure and useful use of OpenAI, DeepSeek, Gemini, or similar models
- APIs offering content, evaluation, or communication support
- Webhooks or external automations supporting your use case

Features NOT Counted as Core Features

Feature	Reason
Login system only	Expected infrastructure, not a solution
Static content or landing page	No user input or interactivity
Contact form	Too generic unless purpose-specific
Basic calendar	Must be tied to user logic or insights
Visual polish without logic	Design without behavior does not count

Section G: PLANNER

PHASE 1: DECISION & DIGITAL PROTOTYPE (Weeks 1–3)

WEEK	FOCUS / THEME	LOs	TOOLS	DELIVERY	HOURS	DELIVERABLES
1	**Kickoff & Team Formation** Team formation, Spaghetti Challenge, Vibe Coding 101, AI Challenge.	A B C	AI tools, Kanban	Bogdan Marculescu, Stefan Seedorf, Mentors, Group formation	4 hr	Group composition and problem ideas submitted via weekly milestone form
2	**UX Design & Wireframes**	A B C D	Visily, Figma, Pixso, Kanban board tool	Bogdan Marculescu, Stefan Seedorf, Mentors, Group work	4 hr	Wireframes + concept pitch
3	**Figma MVP Build** CHECKPOINT 1	A B C D	Visily, Figma, Pixso, Kanban	Bogdan Marculescu, Stefan Seedorf, Mentors, Group work	4 hr	MVP v0.1 clickable prototype **CHECKPOINT 1:** (problem, concept, digital prototype)

PHASE 2: BUILDING (Weeks 4–7)

WEEK	FOCUS / THEME	LOs	TOOLS	DELIVERY	HOURS	DELIVERABLES
4	**AI Agents Workshop** Introduction to AI agents. Integration strategy for startup projects. Tech stack decision	A B D	AI Agents platform	Stefan Seedorf, Bogdan Marculescu, Mentors, Group work	4 hr	Agent integration plan Tech stack decision Start building **DRAFT 1:** (digital prototype report)
5	**Authentication & First Feature**	A B D	Platform of choice (Softr, Lovable, Base44, or other)	Bogdan Marculescu, Stefan Seedorf, Mentors, Group work	4 hr	Working login + Feature 1
6	**Integration & Second Feature**	A B C D E	Platform of choice, AI tools	Bogdan Marculescu, Stefan Seedorf, Mentors, Group work	4 hr	Working app with 2 features
7	**Advanced Features** CHECKPOINT 2	A B C D	Platform of choice, AI, Kanban	Bogdan Marculescu, Stefan Seedorf, Mentors, Group work	4 hr	Working app with 3 features **CHECKPOINT 2:** (app, Kanban evidence, tech stack choice, reflection)

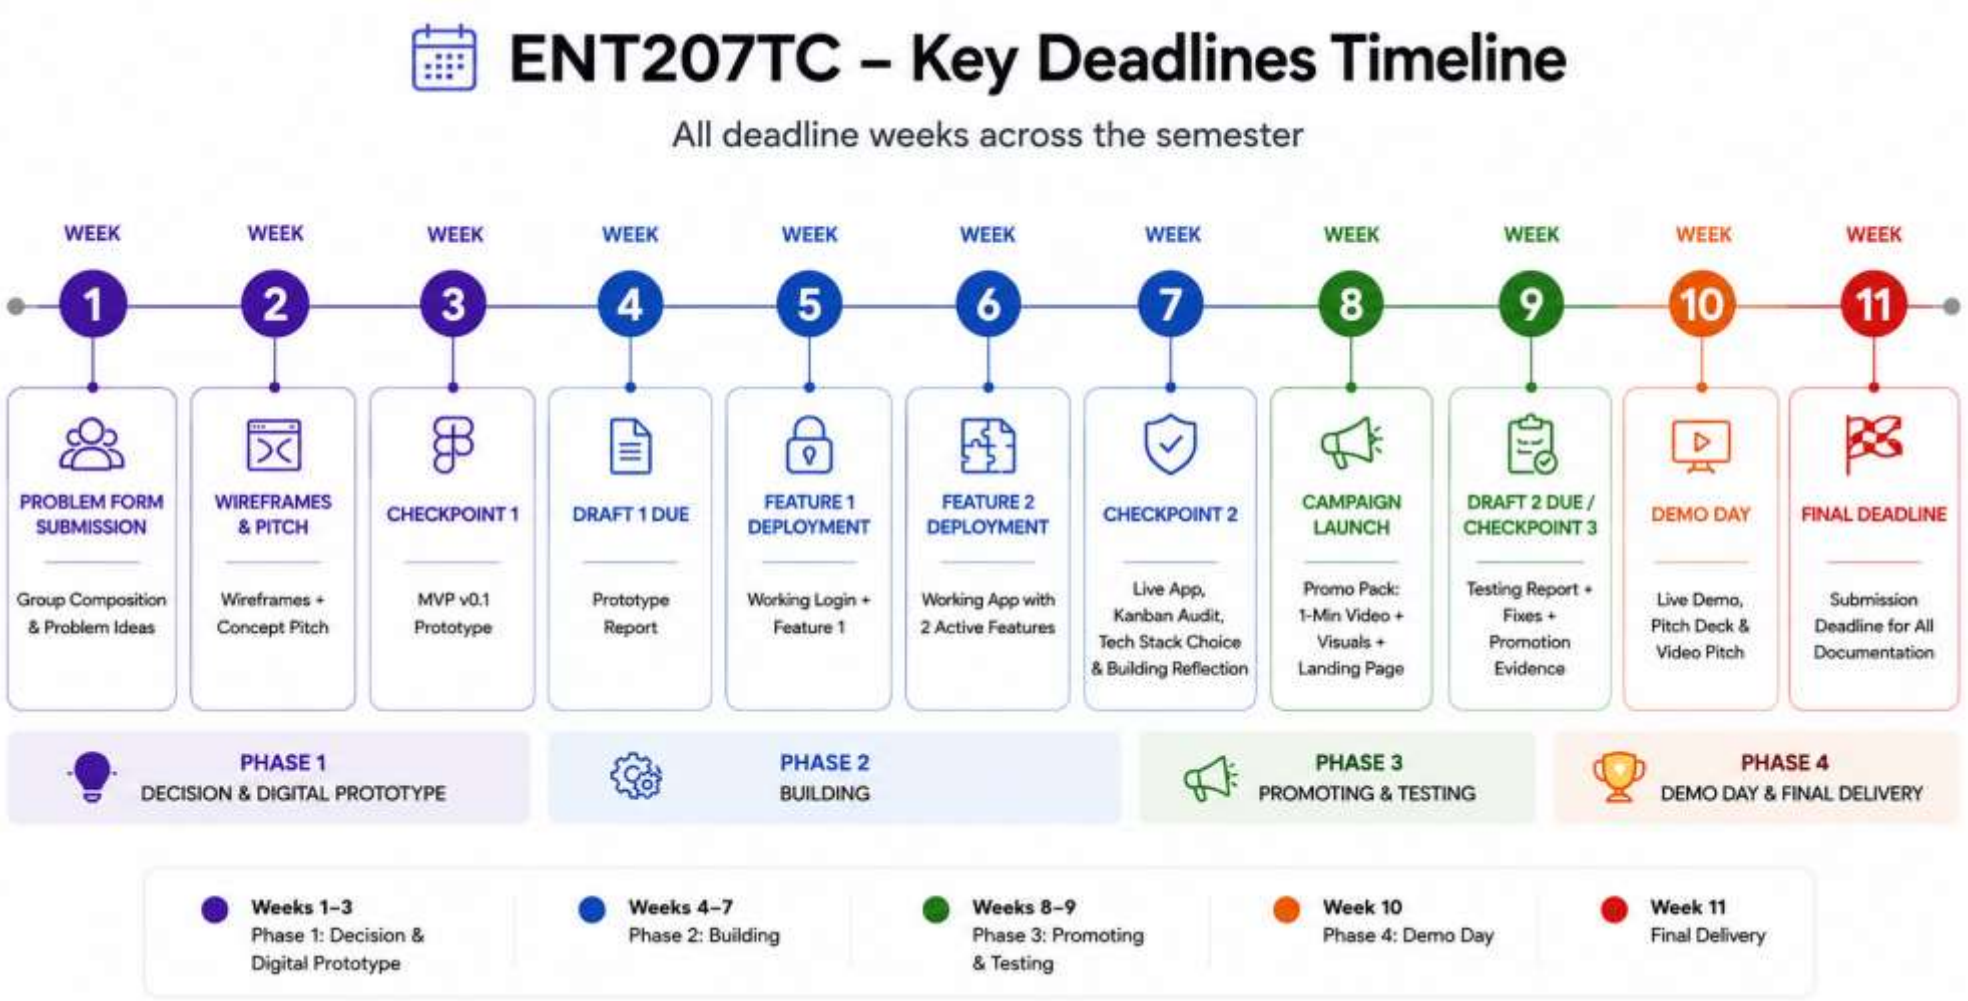

PHASE 3: PROMOTING & TESTING (Weeks 8–9)

WEEK	FOCUS / THEME	LOs	TOOLS	DELIVERY	HOURS	DELIVERABLES
8	**Hackathon — Promo Pack**	C D	Canva, Visily, platform of choice	Bogdan Marculescu, Stefan Seedorf, Mentors, Group work	4 hr	Promo pack: 1-min video + visuals + social media post + landing page. Promotion starts.
9	**Testing, Quality & Promotion** CHECKPOINT 3	C D	Testing tools, analytics	Bogdan Marculescu, Stefan Seedorf, Mentors, Group work	4 hr	Usability testing report (10+ testers) + fixes + promotion evidence **CHECKPOINT 3:** Submission Mentor review. **DRAFT 2:** (Promotion report, User testing report)

PHASE 4: DEMO DAY (Week 10)

WEEK	FOCUS / THEME	LOs	TOOLS	DELIVERY	HOURS	DELIVERABLES
10	**DEMO DAY**	A B C D E	All	Bogdan Marculescu, Stefan Seedorf, Mentors, School support/judges	4 hr	Live demo + pitch deck + professional video (with subtitles) + live recording. Overall reflection.
End of Week 11	Submission deadline for all documentation	–	–	–	–	Complete curated documentation Upload to LMO

CHECKPOINT Review & Feedback — **DRAFT** Supporting Report — **FINAL SUBMISSION** To Learning Mall (LMO)

ENT207TC – Key Deadlines Timeline
All deadline weeks across the semester
WEEK 1
PROBLEM FORM SUBMISSION
Group Composition & Problem Ideas
WEEK 2
WIREFRAMES & PITCH
Wireframes + Concept Pitch
WEEK 3
CHECKPOINT 1
MVP v0.1 Prototype
